

Medical Interactive “Suggested” Priority List for Courses

Because there are over 150 courses available in the Medical Interactive Catalog, we’ve provided you with this ‘suggested’ course list to give you the opportunity to choose courses that are related to the most prevalent patient safety issues and most frequent types of claims.

We’ve identified these for Physicians and Nurses and have also provided you with a specific list for those professionals, both physicians and nurses, who provide Perinatal Care.

Physicians:

- Dismissing a Patient – *NEW!*
- Clinical Practice Guidelines and the Standard of Care
- Diagnostic Error and Claims: Reducing the Risk
- Electronic Medical Records: How to Use Them with Maximum Safety
- Emergency Medicine: Risk and Claims
- EMTALA: What Physicians Need to Know
- Sepsis: Early Recognition and Treatment
- Surgical Error – Underlying Causes: Lessons from Claims Data

Nursing:

- Electronic Health Records Safety – The Nurse’s Role
- EMTALA: Regulation and Best Practices for Nurses
- Falls Prevention for Nurses
- Incident Reporting: The Clear Picture
- Nursing Handoff Communications
- Pressure Ulcer and Wound Assessment and Documentation for Nurses
- Reducing Inpatient Medication Administration Errors
- Sepsis: Early Recognition and Treatment

Perinatal

- EFM Case Study #7: Levels of Care and Transport
- EFM Case Study #9: Verbal Communication
- EFM Case Study #11: Decelerations-Does Depth-Duration-Frequency Matter?
- EFM Case Study #12: Chain-of-authority
- EFM Case Study#15: Critical Event Notification-Is Aspirin the New Pregnancy Miracle Drug?
- Maternal and Neonatal Levels of Care & Transfer Implications
- Maternal Fetal Newborn Stabilization
- Postpartum Hemorrhage UPDATE Part II: Management Strategies-Nursing Considerations
