Why Medical Interactive?

Risk Management and Patient Safety Solutions that Transform the Learner Experience and Outcomes

Experience & Outcomes Matter

Medical Interactive is a national provider of risk management and patient safety continuing education for healthcare providers. The continuing education program has offered e-learning education to healthcare providers for over 20 years. With a national faculty of experts and medical educators, Medical Interactive transforms the learner experience and helps organizations improve patient safety outcomes.

Are You Measuring Your Team's Knowledge Retention?

Measuring learner retention of risk management and patient safety tactics and strategies is the focus of our continuing medical and nursing education. Medical Interactive's customized learning management system is specifically designed to gauge learner needs, educate, measure learner performance and help enhance patient safety outcomes.

After implementing Medical Interactive education, users have demonstrated an approximate

30%

increase in clinician knowledge of risk and patient safety.

Enterprise Solutions

Medical Interactive works with enterprise clients, such as hospitals and health systems, to customize education designed to reduce risk and improve patient safety. Services include:

- Evaluation of risk management and patient safety education performance for the health system or hospital, at the department or individual level
- Customized assessments and courses developed to meet client needs
- Ability to assign courses to groups or individuals based on assessments and needs
- Tracking progress of course completion by staff
- Reassessment of what was learned and implemented to monitor improvement
- Personalized client portal with cobranding options
- Uploading of client-generated courses onto client portal
- Tailored course packages

As a national provider, Medical Interactive offers accredited activities for CME, CNE and MOC credit.

Initial Assessment

Follow-Up Assessment

Transforming the Learning Experience

3 Dimensions of Learner Response

1. Prioritization of Risk Severity

Risk levels – high, moderate and low – are assigned to each assessment question.

2. Risk Management Concepts

The five core root causes of patient safety issues: cognition, communication, performance, professionalism and system.

3. Learner Response Accuracy

Validation of current knowledge and identification of areas of remediation based upon correct and incorrect answers.

Our Comprehensive Approach

Helps the Risk Manager measure the learner's knowledge and retention over a specified period of time and contributes to positive patient safety outcomes.
